

ESLAM R. MADHOUN

Flutter Developer · Clean Architecture · BLoC/Cubit Specialist [Linkedin Profile](#)
eslammadhoun3@gmail.com | +970 594 858 921 | github.com/eslammadhoun | Gaza, Palestine

PROFESSIONAL SUMMARY

Flutter Developer with production-grade experience building cross-platform mobile applications using Clean Architecture, BLoC/Cubit state management, and modern Dart patterns. Delivered two complete e-commerce applications from concept to deployment — integrating Stripe Payment Gateway, Firebase (Firestore, Auth, Cloud Functions, FCM), Google Maps SDK, Dio/Retrofit networking, and RESTful APIs. Formally assessed across 52+ Flutter interview questions with demonstrated expertise in architecture design, networking, performance optimization, and CI/CD. Committed to writing maintainable, testable code and shipping exceptional user experiences.

TECHNICAL SKILLS

Mobile	Flutter, Dart 3.x, Android, iOS, Responsive UI, Material Design 3, Adaptive Layouts
Architecture	Clean Architecture, MVVM, MVC, SOLID Principles, Modular Design, Feature-first Structure
State Mgmt	BLoC, Cubit, flutter_bloc, Freezed, State Unions, Optimized Widget Rebuilds
Networking	Dio, Retrofit, REST APIs, Interceptors, Repository Pattern, Either<Failure, T>, dartz
Backend / DB	Firebase (Firestore, Auth, Cloud Functions, FCM), SQLite, sqflite, Hive, Shared Preferences
Payments	Stripe Payment Gateway, Secure Token Handling, Cloud Functions Middleware
Tooling	Git, GitHub, Android Studio, VS Code, Xcode, Postman, Figma
Additional	Google Maps SDK, go_router, Push Notifications (FCM), Unit Testing, CI/CD, get_it, mockito

PROJECTS

Necart Evo · E-Commerce Flutter App

Mar 2026 – May 2026

- Architected a production-oriented Flutter/Dart app using feature-first Clean Architecture — isolated **flutter_bloc** BLoCs per feature with **Freezed** state unions, optimized widget rebuilds via **BlocBuilder** selectors, and predictable event-driven flows across cart, wishlist, auth, and product modules.
- Built a modular networking and repository layer using **Dio** with custom interceptors, **Retrofit** for type-safe API contracts, and functional error handling (**Either<Failure, T>** via **dartz**) for clean separation between data, domain, and presentation.

- Engineered secure, resilient user flows using **flutter_secure_storage** for encrypted token storage, **sqlite** for local persistence, and global session-expiration handling via Dio interceptors — with optimistic UI updates for wishlist/cart operations.
- Designed a reusable component library following **Material Design 3** principles and implemented scalable navigation architecture using **go_router** with deep-linking and route guards.

GitHub: github.com/eslammadhoun/evo_project

Shopy · Full-Stack E-Commerce App

Nov 2025 – Mar 2026

- Built a complete **Flutter/Dart** e-commerce app backed by Firebase — real-time product catalog via **Firestore**, user auth via **Firebase Auth**, and cloud-side business logic using **Cloud Functions** (Node.js).
- Implemented **Clean Architecture** with **Cubit (flutter_bloc)** for state management — strict layer separation (data/domain/presentation), **shared_preferences** for lightweight local state, and provider-free dependency injection via **get_it**.
- Integrated **Stripe Payment Gateway** (via Cloud Functions for secure secret handling) and **Google Maps SDK** for real-time delivery tracking with custom map markers and polyline routes.

WORK EXPERIENCE

Junier-Level Flutter Developer

Mar 2025 – Mar 2026 Gaza City

- Developed and shipped scalable Flutter/Dart mobile applications applying **SOLID principles** and **Clean Architecture** to enhance maintainability and scalability — feature-first folder structure, use-case driven domain layer, and dependency injection via **get_it**.
- Translated Figma designs into pixel-perfect, responsive Flutter UI screens using custom widgets, MediaQuery-based layouts, and **Material Design 3** theming — ensuring design system consistency and optimal cross-device user experience.
- Integrated Firebase suite — **Firestore** for real-time remote storage, **Firebase Auth** (email/password + social), **Cloud Functions** for secure server-side logic, and **FCM** for push notifications.
- Implemented **Stripe Payment Gateway** using Cloud Functions as a secure middleware layer; integrated **Dio** HTTP client with interceptors for token refresh and error normalization.
- Maintained version control with Git/GitHub using a feature-branch workflow, participated in daily sprint stand-ups, and wrote unit tests (**flutter_test**, **mockito**) to ensure code stability and facilitate feature updates.

Flutter Development Program — Intern · Gaza Sky Geeks

May 2025 – Nov 2025 Gaza

- Completed structured training covering Dart fundamentals, Flutter UI, state management (**BLoC/Cubit**), RESTful web services, local databases, and mobile security best practices.
- Built progressively complex projects during the program, culminating in architecture patterns and real API integration work that directly informed production projects.

EDUCATION

Bachelor of Software Engineering · Al-Azhar University, Gaza

2024 – Present

- Relevant coursework: Data Structures & Algorithms, Mobile Development, Database Systems, Software Engineering, Object-Oriented Programming.
