ESLAM R. MADHOUN

Flutter Developer & On-Device AI Engineer

eslammadhoun3@gmail.com | +970 594 858 921 | Gaza, Palestine | Open to full-time roles & remote freelance

Portfolio | github.com/eslammadhoun | LinkedIn | Hugging Face | Kaggle

PROFESSIONAL SUMMARY

Flutter developer who builds production-quality mobile apps and puts AI inside them, running on the phone rather than in the cloud. One year of professional Flutter experience at TS2G, plus shipped products of my own, including **Nutq**: an iOS and Android app that transcribes and summarizes Arabic speech fully offline using a **Gemma 3 1B model I fine-tuned** and quantized to 4-bit. Strong in Clean Architecture, BLoC, offline-first data, native Swift/Kotlin integration, and automated testing; hands-on with PyTorch, Hugging Face, and LiteRT for training models and deploying them on devices. Especially interested in Arabic NLP and speech.

TECHNICAL SKILLS

Mobile	Flutter, Dart 3.x, Android, iOS, Material Design 3, Responsive & RTL/LTR UI
Architecture	Clean Architecture, BLoC/Cubit, MVVM, Repository Pattern, SOLID, Feature-first Structure
Data & Backend	Firebase (Firestore, Auth, Cloud Functions, FCM), REST, GraphQL, Retrofit + Dio, Drift / SQLite, Hive
AI / ML	LLM & ASR fine-tuning (Gemma, Whisper), PyTorch, Hugging Face Transformers, 4-bit Quantization, LiteRT-LM, WER/CER evaluation
Native & Media	Swift & Kotlin platform channels, FFmpeg, Background processing, Local notifications
Quality & Tools	Unit/widget/cubit testing, GitHub Actions CI, GetIt, Freezed, go_router, Stripe, Google Maps SDK, Git, Figma

EXPERIENCE

Junior Flutter Developer · TS2G

Mar 2025 – Mar 2026 · Gaza (On-site)

- Built and maintained Flutter apps with **Clean Architecture** and **BLoC**: feature-first structure, use-case driven domain layer, and dependency injection with **get_it**.
- Integrated REST APIs with **Retrofit + Dio**, using interceptors for token refresh and consistent error handling; implemented secure authentication flows and local data persistence.
- Turned Figma designs into responsive, pixel-perfect Flutter screens with Material Design 3 theming, working closely with design and backend teams.
- Integrated **Firebase** (Firestore, Auth, Cloud Functions, FCM) and **Stripe** payments through Cloud Functions as a secure middleware layer.
- Worked in a feature-branch Git workflow with daily stand-ups, and wrote unit tests (flutter_test, mockito) to keep features stable.

Flutter Development Program — Intern · Gaza Sky Geeks

May 2025 – Nov 2025 · Gaza

- Structured training in Dart, Flutter UI, state management (BLoC/Cubit), REST services, local databases, and mobile security; built progressively complex projects with real API integration.

PROJECTS

Nutq · Offline Arabic Speech-to-Text & AI Summaries *Aug 2026 – Oct 2026*

- Flutter app (iOS & Android) that turns audio, video, and YouTube links into an Arabic/English transcript plus an AI summary with key points, **entirely on-device**: no servers, no API costs, works in airplane mode.
- **Fine-tuned Gemma 3 1B** for Arabic summarization, quantized it to 4-bit, and ran it on the phone with **LiteRT-LM**; published the model on Hugging Face.
- Built an on-device speech pipeline (**FFmpeg** audio extraction → **Moonshine** ASR with live transcript), bridged to native **Swift** and **Kotlin**.
- Cut the install to **~96 MB** (from ~700 MB) with on-demand model downloads, resume support, and SHA-256 verification; added a background job system with progress notifications and cancellation.
- BLoC + Clean Architecture, Drift/SQLite, bilingual RTL/LTR UI with light and dark themes, **440+ automated tests** and GitHub Actions CI.

Whisper Fine-Tuning for Arabic Dialects · Kaggle Notebook *Jul 2026*

- Reproducible pipeline to fine-tune Whisper-Small on **52k+ Arabic dialect clips** using only a free T4 GPU: streaming data loading, Arabic text normalization, duration/token filtering, on-the-fly log-mel features, adaptive (per-GPU) training settings, and WER/CER-based checkpointing.

kaggle.com/code/eslammad3/whisper-ar-dialectal-v3small

DocDoc · Medical Appointment Booking *May 2026 – Jul 2026*

- Doctor search, filter, and sort with map integration, live time-slot booking, and a real-time chat inbox on Firestore; multi-flavor builds with BLoC/Cubit, Retrofit + Dio, GetIt, and Freezed.

github.com/eslammadhoun/Doc-doc

Nectar EVO · E-Commerce App *Mar 2026 – May 2026*

- Feature-first Clean Architecture with isolated BLoCs and Freezed state unions; Dio interceptors + Retrofit with Either<Failure, T> error handling; cart, wishlist, and notifications persisted in SQLite with optimistic UI and rollback; secure JWT sessions and go_router route guards.

github.com/eslammadhoun/E-Commerce-Evo-Shoping

Shopy · Full-Stack E-Commerce App *Nov 2025 – Mar 2026*

- Firebase-backed store (Firestore, Auth, Cloud Functions in Node.js) with Cubit and Clean Architecture; **Stripe** payments through Cloud Functions and **Google Maps SDK** delivery tracking with custom markers and polylines.

github.com/eslammadhoun/shopy

EDUCATION

B.Sc. Software Engineering · Al-Azhar University, Gaza *2024 – Present*

- Relevant coursework: Data Structures & Algorithms, Mobile Development, Database Systems, Software Engineering, Object-Oriented Programming.

LANGUAGES

Arabic (native) · English (professional working proficiency)
